DECORATION METHODS

LASER

Laser engraving is an ideal technique for decorating wood, rubber, metal, glass and microfiber products. Laser creates a clean, polished appearance with high precision etching of artwork into the product's surface.

UV PRINT

UV printing is printing with polymere inks that are UV dried. It's great for full colour printing including tonal transitions on both small and large areas. Multiple UV imprint makes for the relief printing.

DTF

DTF (Direct To Film) printing is an economical and perfect printing technology for high-quality printing on fabric products and more. DTF gives great opportunities to make fast and multi-color graphics and photos, taking into account colour tones.

SILKSCREEN

Silkscreen printing is a universal printing technique, especially for large decoration area, whereby a mesh is used to transfer ink onto a substrate, except in areas made impermeable to the ink by a blocking stencil. Each colour is printed independently.

DEBOSSING

Debossing is a technique using a die to heat-press artwork into the product's soft surface.

PAD PRINTING

Pad printing is a highly efficient technique for decorating products of different shapes and surfaces. A company logo or any artwork is applied onto the item with a soft, smooth stamp, called a pad.
